

Elevations Deck System

Estimating/Quotation

Utilize Elevations Price Calculator 24 Inch Master ET

- Step 1: Enter Square Footage of Coverage. (round width and length of coverage area to the closest 2' multiple. Example 19'4" becomes 20')
- Step 2: Enter Perimeter Lineal Footage. (round width and length of coverage area to the closest 2' multiple. Example 19'4" becomes 20')
- Step 3: Determine the highest elevation point roof to top of deck (usually the drain).
- Step 4: Subtract (1.5" for deck tile) or (Decking +Stringer combination depth) to determine tallest pedestal requirement.
- Step 5: Determine the price for the tallest pedestal and enter into Calculator.
- Step 6: Enter Deck Tile or Decking and Stringer Pricing into Calculator.

Hard Quote/Order Placement

Utilize Elevations Pedestal Take-Off Form

To develop a hard quote or generate an order confirmation we need additional information.

- Step 1: Customer must fill out Elevations Pedestal Take off Form and provide a drawing with Perimeter and High Low Elevations Points.
- Step 2: Provide this information to Timber Holdings Team.
- Step 3: Timber Holdings Team will provide a Pedestal Cut List of actual pedestals required.
- Step 4: Generate Hard Quote or Order Confirmation as required. Price adjustments can be made at this time if required.

Order Confirmation

Once an order is confirmed THUSA will deliver a color coded Layout Drawing which shows the pedestal schedule and placement.
